

Unstable test result and collapse south of Cooke

Date

Sat, 03/22/2025 - 18:55

Activity

Skiing

Skied south of Cooke today. Got an ECTP28 down 80cm on small facets above a MF crust that was buried on March 14. West [aspect](#) at 9500'. While filling in the [snowpit](#) I got a large [collapse](#). This is the same layer we were getting ECTP results on earlier this week north of town.

Region

Cooke City

Location (from list)

COOKE CITY
